Going Mobile by Adapting your Existing Website

If you already have installed you website, there is another way to create a Mobile website without building it from scratch. There are 2 ways to do this: one works for WordPress websites and one works for Non- WordPress websites.

If you already have a WordPress website installed but it's not responsive, this will be the easiest and fastest way to create a Mobile Website.

- The first thing you have to do is check your site and determine whether or not it is responsive, and to do that you can simply visit your site using the Opera Mobile Emulator: As you can see, this site is not responsive because it is completely displayed as if you were on a desktop computer. As is, the text is absolutely impossible to read. People need to be able to see your website from their mobile devices without having to magnify the interface so they can read your content. The following steps will allow you to adapt your site so that it can be easily seen on mobile devices:

Process applied to a WordPress Website

Step 1: Search for the WP Mobile Detector Mobile Plugin

- What you need to do here is go to the Plugins section of your WordPress dashboard.
- Then click on “Add New”
- Now you will type “WP Mobile Detector Mobile Plugin” and click search plugins

Step 2: Install the Plugin

- Then what you need to do is click on “Install Now”
- Then click “Ok”
- Click Activate Plugin

Now you will need to do one last thing before you are done.

Step 3: Set the Permissions

- Now you will need to go to your CPanel account
- Click on the “File Manager” Button
- Then double click on “www”
- Double click on your domain
- Then you will search for the “cache” folder inside all of the following folders:

wp-content plugins wp mobile detector cache

- Once selected you will click on “Change Permissions”
- You will make sure all boxes are checked and click “Change Permissions”

Step 4: Test the new Website on the Mobile Emulator

Now you are done. Extremely easy, don’t you think?

What you just did was convert your website into a Responsive website, ready to be accessed with absolutely any mobile device and desktop computer.

Now let me show you how to do the same thing to a non-WordPress website.

Process applied to a non-WordPress Website

To successfully apply this process, the service we will use is called dudamobile.com. What you will be creating here is a complete Mobile Website but using your existing website. This works great for websites that are non-WordPress.

Step 1: Go to www.dudamobile.com

Step 2: Insert the URL of your website.

- We will be using the ClickBank.com website for testing purposes.

Step 3: Redesign your new Mobile Website.

- After a few minutes you will see a Mobile Preview of your website automatically generated. You can edit the Layout of your Mobile Website in this step.
- Click “Next” and then you will be able to edit the Content. You will be able to even add highly effective marketing tools to it as well.

- Click next and you will be able to create your account so your brand new Mobile Website can go live in just seconds.

You then will have access to the URL of your brand new Mobile website

Step 4: Test the new Website on the Mobile Emulator

dudamobile.com is considered one of the greatest Mobile Builder tools. It provides you with a lot of awesome features to create an outstanding and high quality Mobile Website.
