

Google Hack Trick

Here is the little Google Hack we found. Very nice and it should be easy to do.

First, grab the "greasemonky addon for firefox", when you use this addon you get a new search option button to retrieve only urls from the results of your search.

Now, do a search with this hack `allinurl:submit "article"`.

Once the search is complete we get a ton of results to post articles. These are hot because Google sees them as the top returns.
